### RISE OF E-COMMERCE

Industrial real estate has been one of the top performing asset classes over the past few years. The outperformance has largely been driven by a secular shift to e-commerce which required retailers to occupy additional warehouse space outside their traditional brick & mortar stores. In 2023 alone, e-commerce sales accounted for \$1.12 trillion in the United States, comprising roughly 19% of total retail sales. The COVID-19 pandemic accelerated this shift to e-commerce as consumers were forced to shop online when brick & mortar retailers were required to close and/or operate under pandemic restrictions. There is still abundant room for e-commerce growth in the U.S. when compared to China, whose e-commerce sales are \$2.68 trillion and comprise 45% of retail sales. It is estimated that every \$1 billion in additional e-commerce sales translates into an additional 1.25 million square feet of additional warehouse space needed. Therefore, if the United States grew e-commerce sales to \$1.77 trillion and 30% of total retail sales, it would require an additional 800 million square feet of additional warehouse space.

CONSTRUCTION PIPELINE SINCE PEAK

Increasing land and construction costs, coupled with decreasing land availability are creating a supply/ demand imbalance for industrial real estate. By way of example, Los Angeles added only 2.6 million square feet of new inventory during 2023 on an existing inventory of 957 million square feet, an increase of merely 0.28%. Receiving timely and predictable entitlement approvals continues to be an obstacle for developers, particularly in California. With limited new supply coming online, existing industrial space will continue be the beneficiary of record levels of absorption and reduced vacancy rates.
